REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The closest prior art Bigiavi et al. (US 7,160,964) are directed teaches all of the limitation of the instant claims except the deactivator. Bigiavi's deactivator is a hydroxy group containing compound having boiling temperature higher than 150°C and a ratio between the molecular weight and the number of hydroxy groups of the compound in the range of 20-200. Although water is known for its function as a deactivator for the olefin polymerization catalysts, Bigiavi expressly disclosed that water is not an effective deactivator to deactivating the active olefin polymer solution due to the tremendous difference between the viscosity of the active olefin polymer solution product and water. The comparative Example 3 disclosed in the specification further shown that the mixture of water and hydroxy group containing compound does not provide effective deactivation when the dynamic viscosity of the aqueous is at 0.5 cp. Because the cited prior does teach or reasonably suggest the deactivator of an aqueous mixture of a dynamic viscosity of higher than 50cp comprising one or more hydroxy or epoxy group organic compounds of the instant claims, the instant claims are deemed to be novel and nonobvious over cited prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
